

Kockica na kockicu

Mali arhitekti

Uvod

- Što možemo složiti pomoću 1, 2, 3 ili 4 jednake kockice?

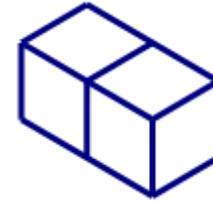

S jednom je kockom lako!

- Jednostavno – nemate izbora. Kako god okrenuli kockicu – ona izgleda jednako!

Ni dvije nisu neki problem!

- Može u jedan red

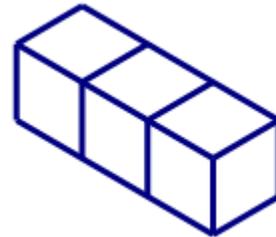

- Ili u jedan stupac

Dodajmo treću kocku!

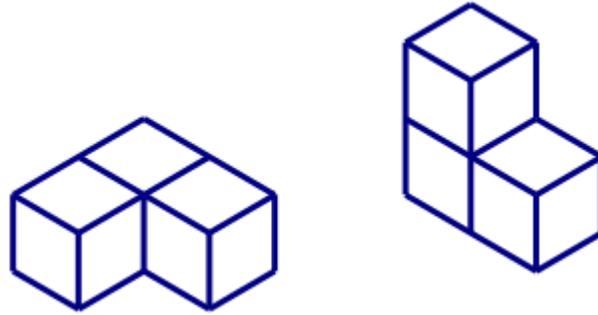

- I sada sve mogu biti u istom redu

- Ili u istom stupcu

- Ali imamo i neke nove položaje!

- Jasno je da složene građevine mogu izgledati „drugačije”, a da su zapravo – iste.

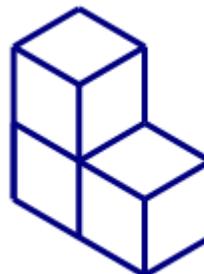

- Pomoću 3 kockice moguće je složiti samo četiri različite „zgrade“:

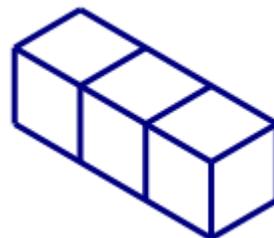

- jednu trokatnicu

- jednu dvokatnicu

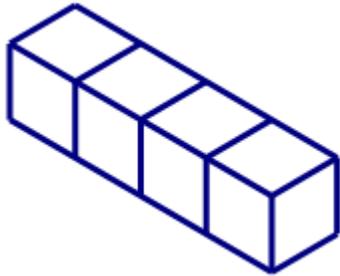

- dvije jednokatnice

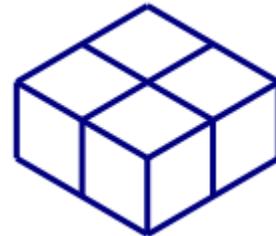

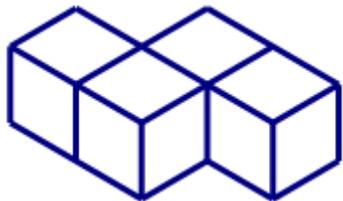

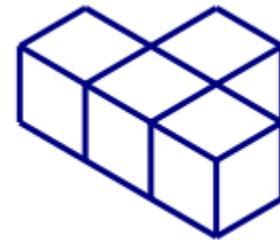

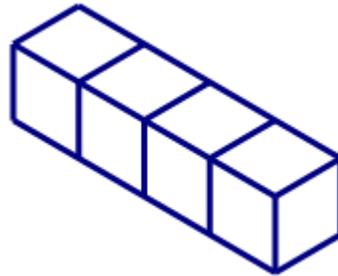

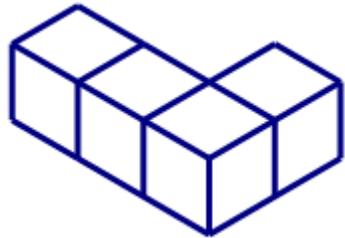

Dodajmo čtvrtu kocku!

- Još uvijek imamo dvije „ekstremne“ mogućnosti: sve kocke u jednom redu ili u jednom stupcu.

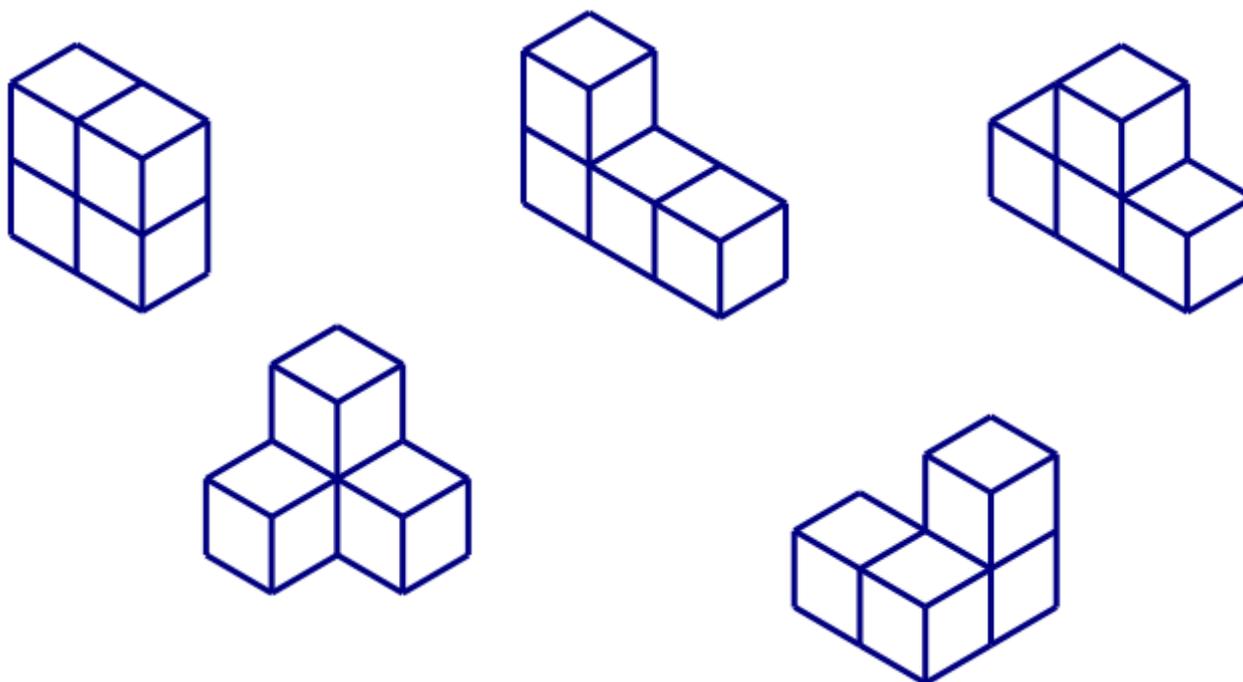

Složimo različite jednokatnice!

- Ima ih ukupno pet!

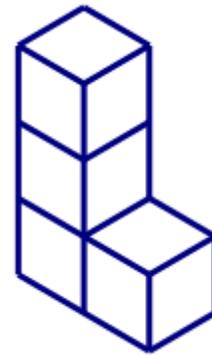

Koliko dvokatnica možemo složiti?

- Ima ih ukupno pet!

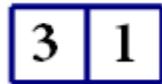

Ostale višekratnice?

- Uz već složenu četverokatnicu, postoji samo jedna „vrsta“ trokatnica!

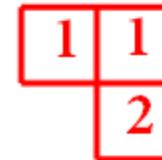

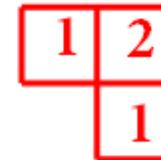

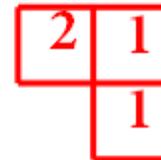

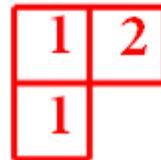

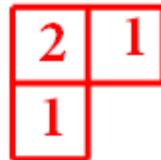

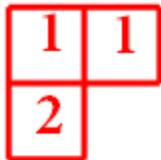

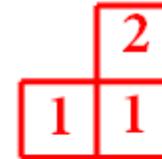

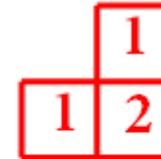

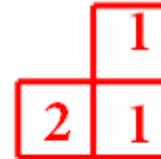

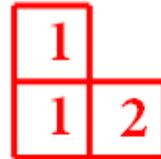

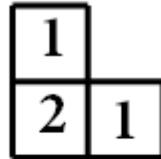

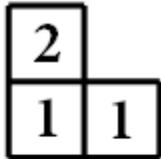

Nadogradnja...

- Zašto postoji samo jedna trokatnica?
- Pogledajmo planove gradnje.

A za dvokatnice?

Konačno jednodatnice
